IT112 Web System Development

Phase 3 – Frontend Development

Lab Report by TechNet

Group Members:

Mico Malana

Christian Silo

Jay Lloyd Chicogo

Nelson Andes

Allen Benedict

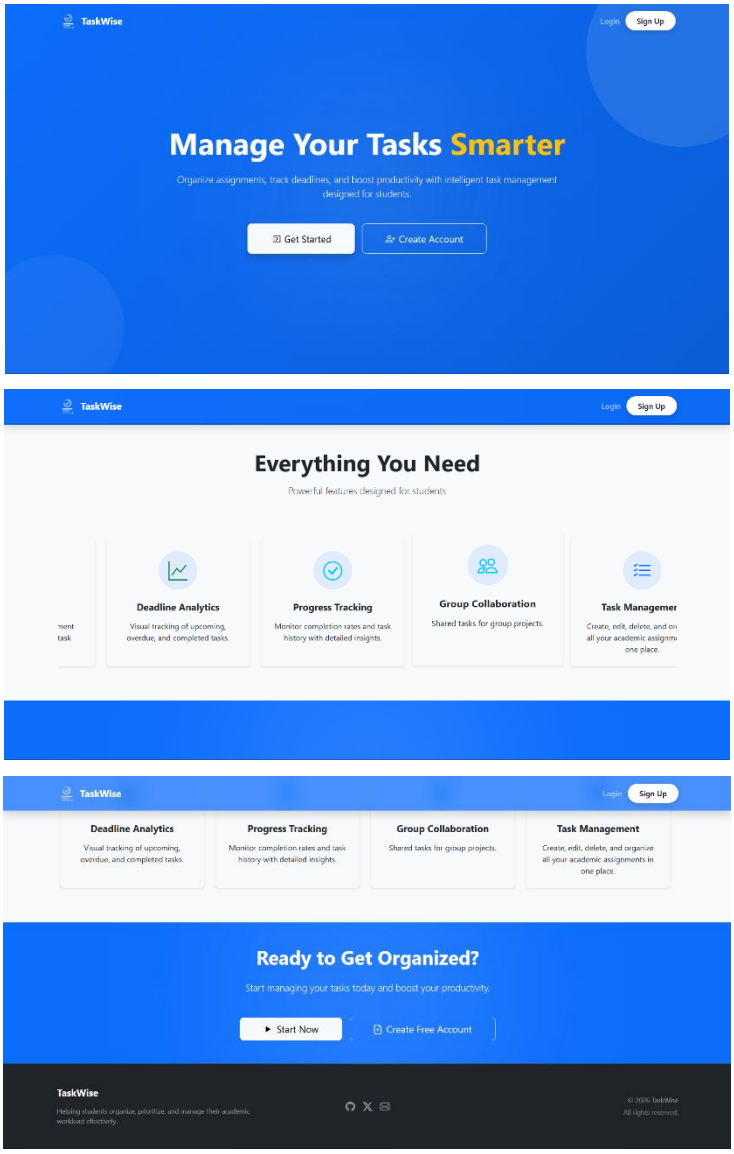
Instructor:

Guillermo V. Red, Jr., DIT

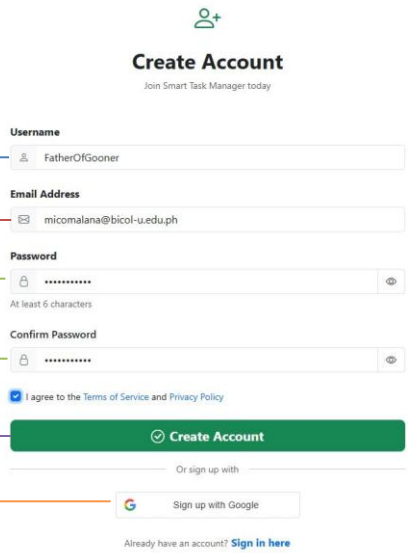
I. Frontend Pages

A. Landing Page

The Landing Page is the first interface displayed when users open the website. It provides an overview of the system and serves as the entry point for users to either log in or register.



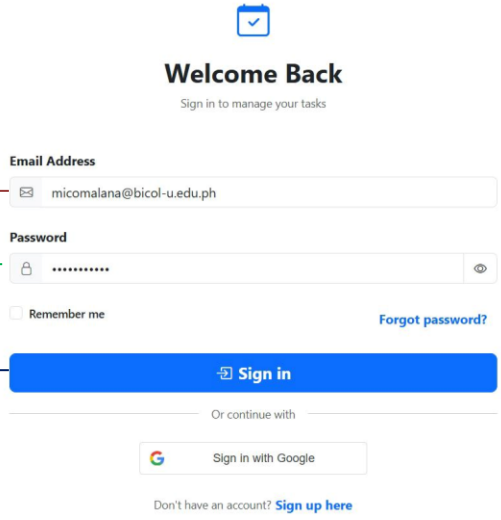
B. Register Page



Here, you will create an account for you to be able to use our website.

- **Username** – This will be your username while using our website you can use any name you want.
- **Email Address** – This would used to verify your access to our website.
- **Password** – This would ensure that only you can access your account.
- **Create Account** – After your done filling up the required information you can now create an account and use our website.
- **Google sign in** – Allows users to log in using their existing Google account for quicker and easier access.

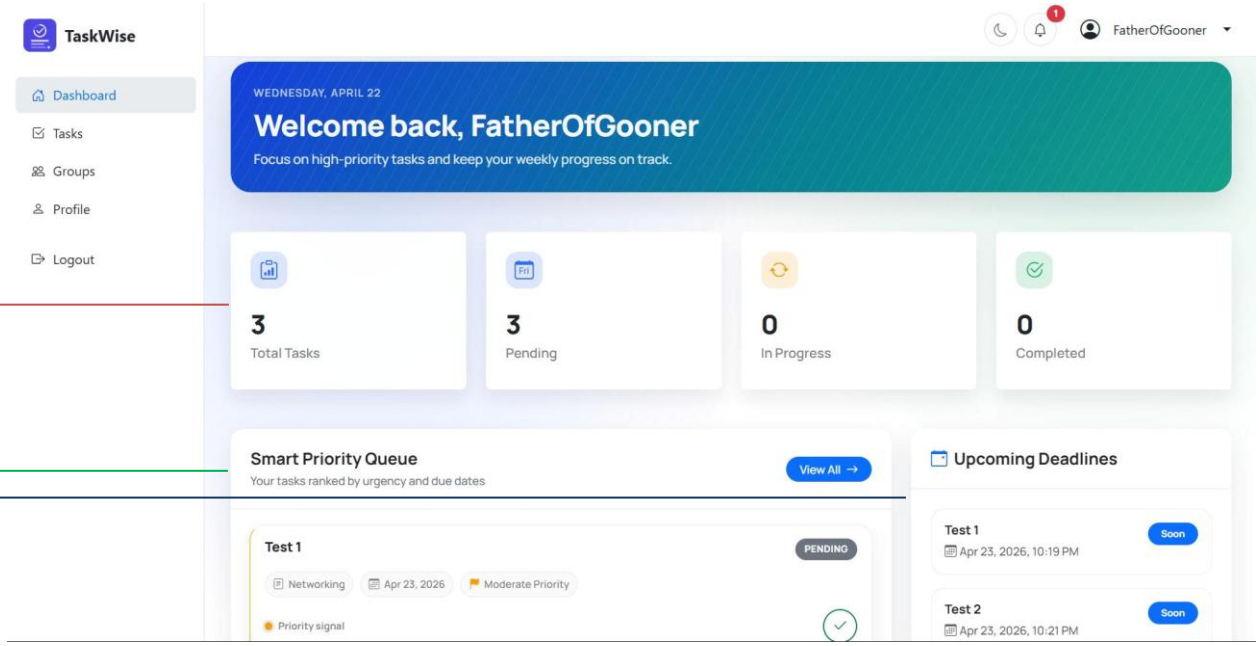
C. Login Page



If you already have an account here is where you can log in into your account.

- **Email Address** – This would verify if you have an account in our website.
- **Password** – This would ensure that you're the one logging in.
- **Sign in** – This would log you in our website enabling you to use our website.

D. Dashboard Page

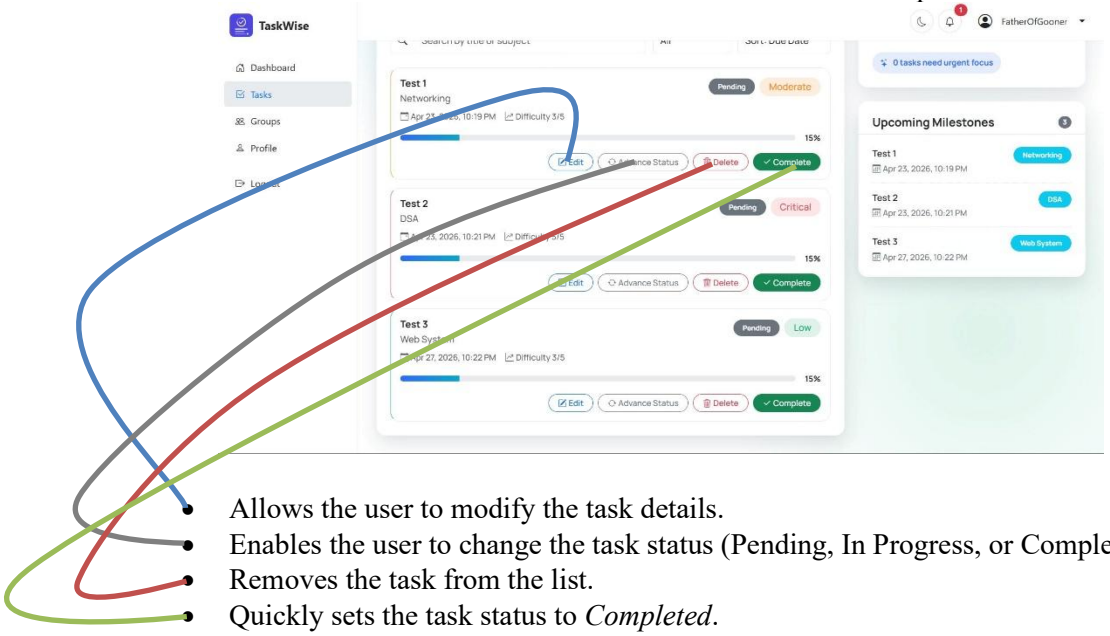


This would be the dashboard of the website showing its features.

- **Summary Cards** – Display the total number of tasks, including pending, in-progress, and completed tasks.
- **Smart Priority Queue** – Highlights tasks along with their names and due dates based on priority.
- **Upcoming Deadlines** – Show tasks with approaching due dates.

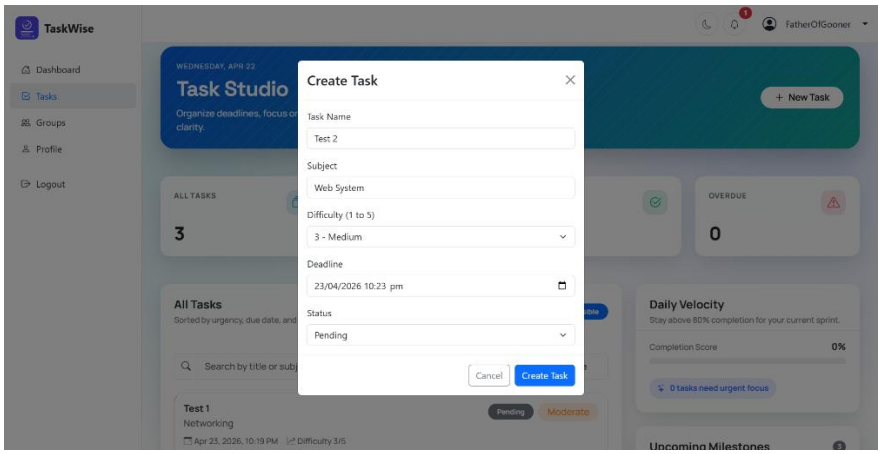
E. Task Page

In this feature it shows the current tasks that the user have put.



- Allows the user to modify the task details.
- Enables the user to change the task status (Pending, In Progress, or Completed).
- Removes the task from the list.
- Quickly sets the task status to *Completed*.

a. Create Task

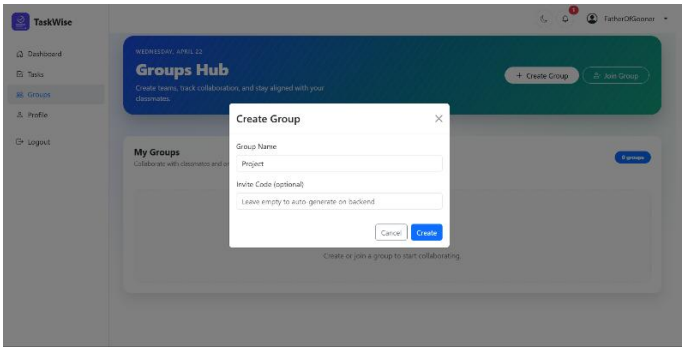


F. Groups Page

On this feature you can join or create a group task. This will be shared to your groupmates.

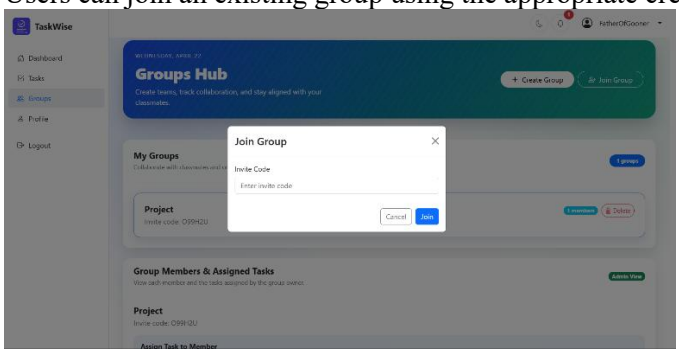
a. Create Group

Users can create a group and become its administrator.

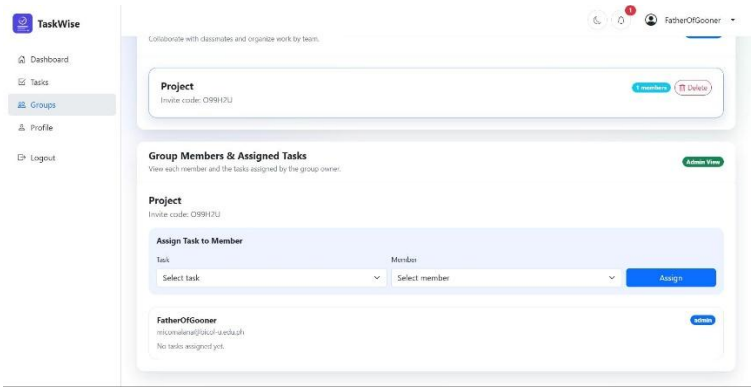


b. Join Group

Users can join an existing group using the appropriate credentials or invitation.

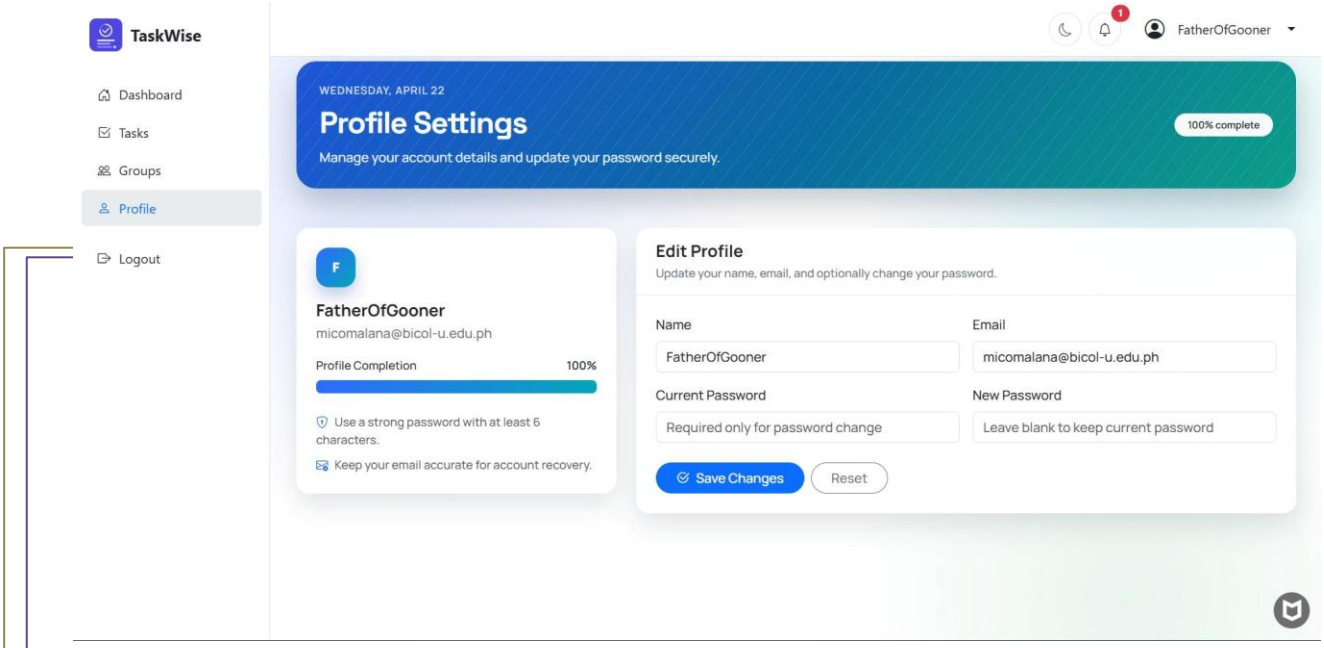


After you have created a group you can assign the task to your groupmates as you are the Admin of the group that you created:



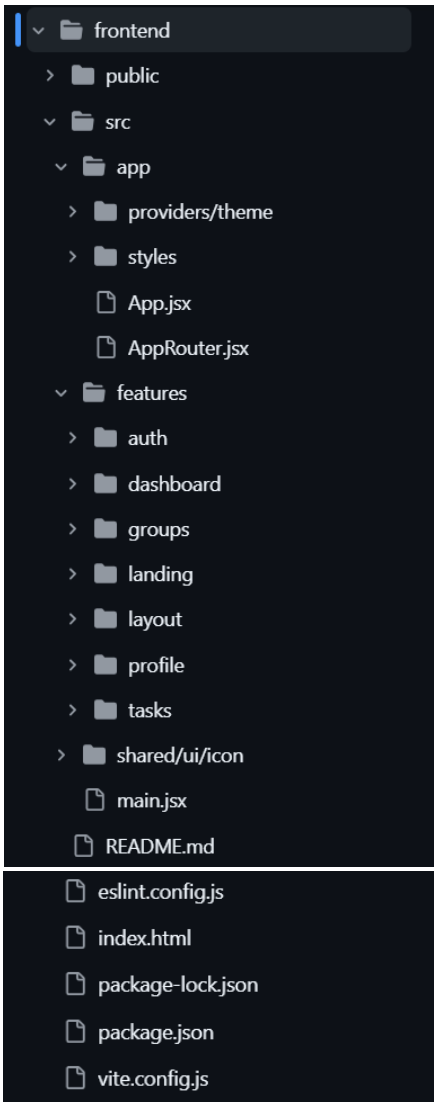
G. Profile Page

On this feature it shows the user profile.



- **Edit Profile** – The user can edit their password on this feature.
- **Log out –** Logs the user out.

II. Github Folder Structure



III. Individual Reflections

A. Project Manager (Mico Malana)

As the Project Manager, I was responsible for overseeing the team's progress and ensuring tasks were completed on time. One challenge I encountered was coordinating with members and avoiding miscommunication, which sometimes caused delays. Despite this, we managed to stay on track through regular updates and collaboration.

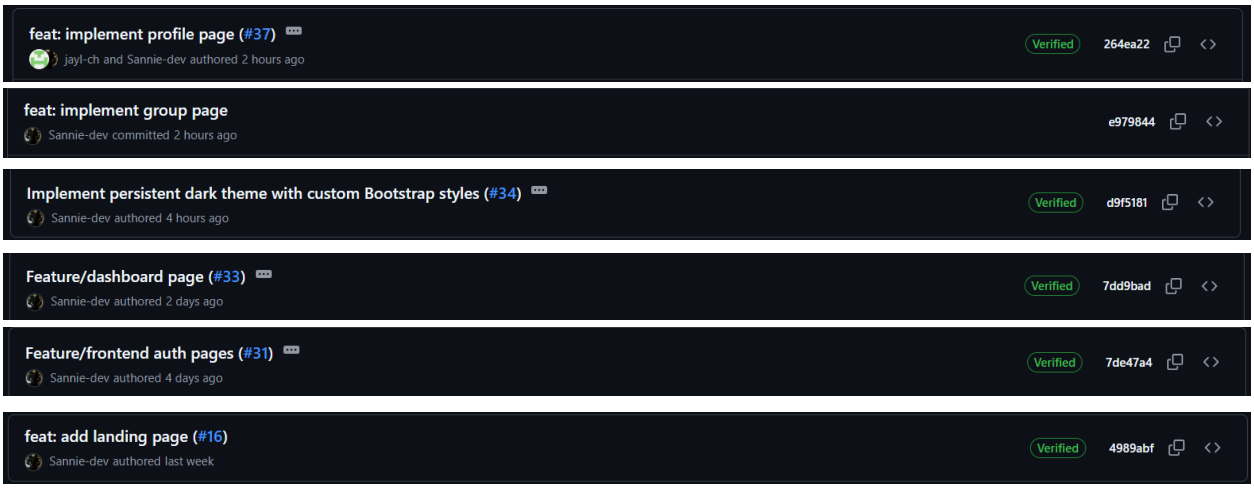
B. Frontend Manager (Christian Sannie Silo)

As the Frontend Developer, I focused on designing and implementing the user interface of the system. I worked on making the application user-friendly and visually appealing while ensuring it functioned properly. One challenge I faced was integrating components smoothly and handling UI issues. This project helped me improve my frontend development and problem-solving skills.

C. GitHub Manager (Jay Lloyd Chicogo)

As the GitHub Manager, I handled the repository, managed branches, and monitored commits. One challenge I encountered was maintaining a clean commit history while multiple members were contributing. I also assisted in resolving merge conflicts and organizing pull requests. This role improved my understanding of Git and strengthened my collaboration skills.

D. Documentation Officer (Mico Malana)

As the Documentation Officer, I was responsible for preparing and organizing the project documentation. I ensured that all features and screenshots were clearly presented and easy to understand. One challenge I faced was making sure the information was complete and well-structured. This experience improved my technical writing and attention to detail.


IV. GitHub Commits
